

## Introduction

HyperTEK Corporation is an innovative Internet Solutions company that provides high quality website design, hosting, and e-commerce development services. We employ some of the best graphical user interface (GUI) specialists, software engineers, system administrators, customer support representatives, and business consultants in the industry. The force that brings these talented individuals together is the common goal of helping your business succeed.

By providing end-to-end solutions in-house rather than outsourcing, we are able to ensure the highest level of quality and maintain a single point of contact. In addition to creating projects from scratch, our versatile and proficient staff can also improve an existing website or application's performance, design, and usability.

## History

Established in 1981, HyperTEK Corporation continues to lead the industry. HyperTEK's goal is to provide our clients with the best service possible. By leveraging the Internet, we are able to develop and deploy solutions that allow our clients to reach a worldwide customer base.

## 4DS Process

At HyperTEK, we pride ourselves in our structured approach to design and development. The first step in our "4DS Process" is to *define* the problem. Clearly defining the problem is the key to the *design* of an effective solution. Once the design has been finalized, HyperTEK starts to *develop* the solution. At the end of the development phase, a deployment plan is devised and the project is *deployed*. The final phase of the 4DS Process is HyperTEK's long term commitment to *support* the project after its deployment.

We look forward to working with you.
